

## Positive UX Experience

An app that I use regularly and enjoy using is 'Just Eat'. I use it to order food and look at the menus and options of restaurants and takeaways around the area I am in.

This app provides a good user experience as it has a clear and concise layout and you can easily order food from it and track its progress. It's very simple and there's nothing overcomplicated with it making it a breeze to interact with.

I have four main reasons parts of the interface that I believe give it a good UI

- (1) The address bar is easy to use and has a your location feature which is helpful if you're in a new place.
- (2) The order again feature placed promptly in the middle is very handy as it just lets you reorder your regular quickly and easily making the experience very convenient.
- (3) A quick way to narrow down what type of food you want making it less cluttered.
- (4) Nice easy way to navigate through the different parts of the app and is very responsive.
